Fight AIDS Now Project

Fighting AIDS with Powerful Anti-HIV Drug
Design Research on Entropia

The Fight AIDS Now project is run by Entropia for the Scripps Research Institute, which is investigating a revolutionary type of HIV protease inhibitor drug that attack HIV viruses even if they evolve to resist today's treatments.

This computer is working with others all over the world as part of the Entropia network to find radically new and effective treatments for AIDS. Your computer's time could even lead to a possible cure for this terrible disease.
